

Building Employability and Competency

The ability to utilize ethics and morality within technology roles continues with being able to

- recommend revised approaches to business operations to address and mitigate ethical issues, and
- apply ethical concepts in personal bias.

In this course, you can demonstrate these skills by passing a final assessment that measures whether you have mastered the following competencies:

- **Competency 1020.2.1: Implements Ethical Decision-Making.** The learner implements ethical decision-making frameworks in the information age.
- **Competency 1020.2.2: Describes Ethical Issues in Data.** The learner describes ethical issues regarding data privacy, accuracy, access, and security.
- **Competency 1020.2.3: Explains Professional Ethical Codes.** The learner explains professional ethical codes and their role in guiding professional behavior.
- **Competency 1020.2.4: Identifies Interventions.** The learner identifies interventions for personal bias and related legal concerns.
